In the Memory of Shlomo Alexander	
<i>P.G. de Gennes</i>	1
1 Topological considerations in superconductivity	
<i>Jacob Rubinstein</i>	3
1.1 Introduction	3
1.2 Introduction to the Ginzburg Landau model	4
1.3 Permanent currents	5
1.4 The Little Parks paradigm	8
1.5 Ginzburg Landau model on graphs	9
1.6 The zero set	16
1.7 Other problems with topological flavor	18
1.7.1 Josephson junctions	19
1.7.2 Vortex lines	19
References	20
2 The de Gennes-Alexander Theory of Superconducting Micronetworks	
<i>José I. Castro, Arturo López</i>	22
2.1 Introduction	22
2.1.1 The Ginzburg-Landau theory	23
2.1.2 de Gennes-Alexander linear approach for micronetworks	25
2.1.3 Symmetry analysis in the dGA theory	28
2.2 Some simple applications of the dGA theory to symmetric micronetworks	32
2.2.1 The yin-yang	32
2.2.2 The double yin-yang	35
2.2.3 Wheatstone bridge	37
2.2.4 The basic triangular gasket	38
2.3 The dGA theory for extended micronetworks	43
2.3.1 Geometrical properties of ladder systems	43
2.3.2 Nodal equations and phase transition boundaries	44
2.3.3 Nodal order parameters	47
2.3.4 Current distribution near the phase transition	50
2.3.5 Some features of the ladders	52
2.3.6 Square and triangular networks	53
2.3.7 Incommensurate, fractal and disordered systems	55

2.4 Beyond de Gennes-Alexander Theory: inside the phase diagram	56
References	59
3 Nodal Sets, Multiplicity and Superconductivity in Non Simply Connected Domains	
<i>Bernard Helffer, Maria Hoffmann-Ostenhof, Thomas Hoffmann-Ostenhof, Mark Owen</i>	61
3.1 Zero sets in superconductivity	61
3.2 Bifurcation from normal solutions. Preliminaries.	63
3.3 The linear Schrödinger operator with magnetic field	64
3.4 The operator K	65
3.5 Bifurcation for special spaces	67
3.6 The toy model	68
3.7 Variation of the ground state energy	70
3.8 Nodal sets	71
3.9 A twofold Riemannian covering manifold	74
3.10 About the multiplicity	76
3.11 About the maximality at circulation $\frac{1}{2}$	77
3.12 The case of 3 holes	80
References	81
4 Connectivity and Flux Confinement Phenomena in Nanostructured Superconductors	
<i>Victor V. Moshchalkov, Vital Bruyndoncx, Lieve Van Look</i>	83
4.1 Introduction	83
4.1.1 Ginzburg-Landau theory	83
4.1.2 Fluxoid quantization	84
4.1.3 Type-I versus Type-II superconductivity	85
4.1.4 Surface nucleation of superconductivity	87
4.1.5 Solution of the linear GL equation in cylindrical coordinates	89
4.2 Connectivity effects in bulk superconductors	91
4.3 Nanostructured superconductors: Single plaquettes	97
4.3.1 Boundary conditions	97
4.3.2 ‘Mesoscopic’ superconductors	98
4.3.3 Nucleation of superconductivity in a loop	98
4.3.4 Nucleation of superconductivity in a disk	99
4.3.5 Nucleation of superconductivity around an antidot	103
4.3.6 Nucleation of superconductivity in a wedge	103
4.4 Dimensional crossover in a loop of finite width	105
4.5 Superconducting micronetworks: Increasing connectivity by adding loops in one dimension	109
4.6 Perforated microsquares	115
4.7 Superconducting films with an antidot lattice	118
4.7.1 Commensurability effects at low magnetic fields	122
4.7.2 The η -enhancement in high magnetic fields	126
References	129

5 Zero Set of the Order Parameter, Especially in Rings	
<i>Jorge Berger</i>	132
5.1 Introduction: The Price of Connectivity	132
5.2 The de Gennes-Alexander (dGA) Approach	134
5.2.1 One Loop	134
5.2.2 Two Loops	135
5.3 Perturbational Approach	136
5.3.1 Uniform Cross Section	137
5.3.2 Weakly Nonuniform Cross Section	138
5.4 Rings with Finite Width	141
5.4.1 Order of the Normal-Superconducting Transition	142
5.4.2 Nonuniform Cross Section – Nondegenerate Perturbation	146
5.4.3 Degenerate Perturbation	148
5.4.4 Critical Points	151
5.4.5 Vortices	154
5.4.6 Inhomogeneous Fields	158
5.4.7 Experimental and Numerical Evidence	160
5.4.8 Josephson Junctions	164
5.5 Main Conclusions	164
References	165
6 Persistent Currents in Ginzburg-Landau Models	
<i>Lúis Almeida, Fabrice Bethuel</i>	167
6.1 Introduction	167
6.2 Onset of currents - trapped fluxes	167
6.2.1 The transition temperature	169
6.2.2 The case of an annulus	173
6.2.3 General domains	175
6.3 Temperature below T_c	175
6.4 Stability of currents once the external field is removed	175
6.4.1 Rewriting F	175
6.4.2 Removing h_{ex}	176
6.4.3 The case where ε is small	176
6.4.4 The case where ε is not small	178
References	179
7 On the Normal/Superconducting Phase Transition in the Presence of Large Magnetic Fields	
<i>Peter Sternberg</i>	181
7.1 Formulation of the Problem	181
7.2 Analysis of Onset in a Disc	183
7.3 Analysis of Onset in a General Bounded Domain	186
7.4 Rigorous Justification of Boundary Localization	190
7.5 Infinite Curvature – Domains with Corners	190
References	191

8 On the Numerical Solution of the Time-Dependent Ginzburg–Landau Equations in Multiply Connected Domains

<i>Gustavo C. Buscaglia, Carlos Bolech, Arturo López</i>	193
8.1 Introduction	193
8.2 Numerical method	195
8.2.1 Discretization of the TDGL equations	195
8.2.2 External boundary conditions	197
8.2.3 Boundary conditions at holes	198
8.2.4 Discretization of the free energy	200
8.3 Examples	200
8.4 Concluding remarks	204
References	205

9 Formation of Vortex-Antivortex Pairs

<i>Sanatan Digal, Rajarshi Ray, Supratim Sengupta, Ajit M. Srivastava</i>	207
9.1 Introduction	207
9.2 Theoretical framework for discussing defect formation	208
9.3 Conventional models of formation of vortices and antivortices	209
9.4 A new mechanism of defect-antidefect production	211
9.5 Resonant production of vortex-antivortex pairs	213
9.6 Conclusion	219
References	220

10 The Order Parameter as a Macroscopic Quantum Wavefunction

<i>Antony J. Leggett</i>	221
10.1 The free Bose gas	221
10.2 The interacting Bose gas	222
10.3 Bose gas with internal degrees of freedom	223
10.4 Cooper pairing: s-wave case	224
10.5 Cooper pairs with internal degrees of freedom	227
References	228

11 The Ehrenberg–Siday–Aharonov–Bohm Effect

<i>Charles G. Kuper</i>	230
11.1 Introduction	230
11.2 The Role of the Electromagnetic Potentials in Quantum Mechanics	230
11.3 The Aharonov–Bohm <i>Gedanken</i> Experiments	232
11.4 Early Experimental “Verification”	233
11.5 Roy’s Theorems	233
11.6 Crucial Experiments	234
References	238

12 Connectivity and Superconductivity in Inhomogeneous Structures

Guy Deutscher 239

12.1 Introduction 239

12.2 The Case of a Normal Metal / Superconductor Interface 241

12.3 Superconducting Networks 243

12.4 Granular superconductors 244
